Platform Engineer

Overview

Platform Engineers build the tools and the tech that companies rely on to get things done quickly, efficiently and safely.

Platform Engineers are just like (and often start as) Software Engineers, but instead of building websites for the public, they build the tools and tech used by the rest of the company. They also improve the cyber safety and efficiency of the tech they work with.

Think of platform engineering as building a train track that takes the quickest and safest route for their team to travel on.

3 signs you should consider platform engineering:

- You love doing things efficiently
- You're tech-savvy
- You love solving problems
