# 1 project overview and approach

# background to the strategy and study

## NSW Mentally Healthy Workplaces Strategy 2018–22

### The need

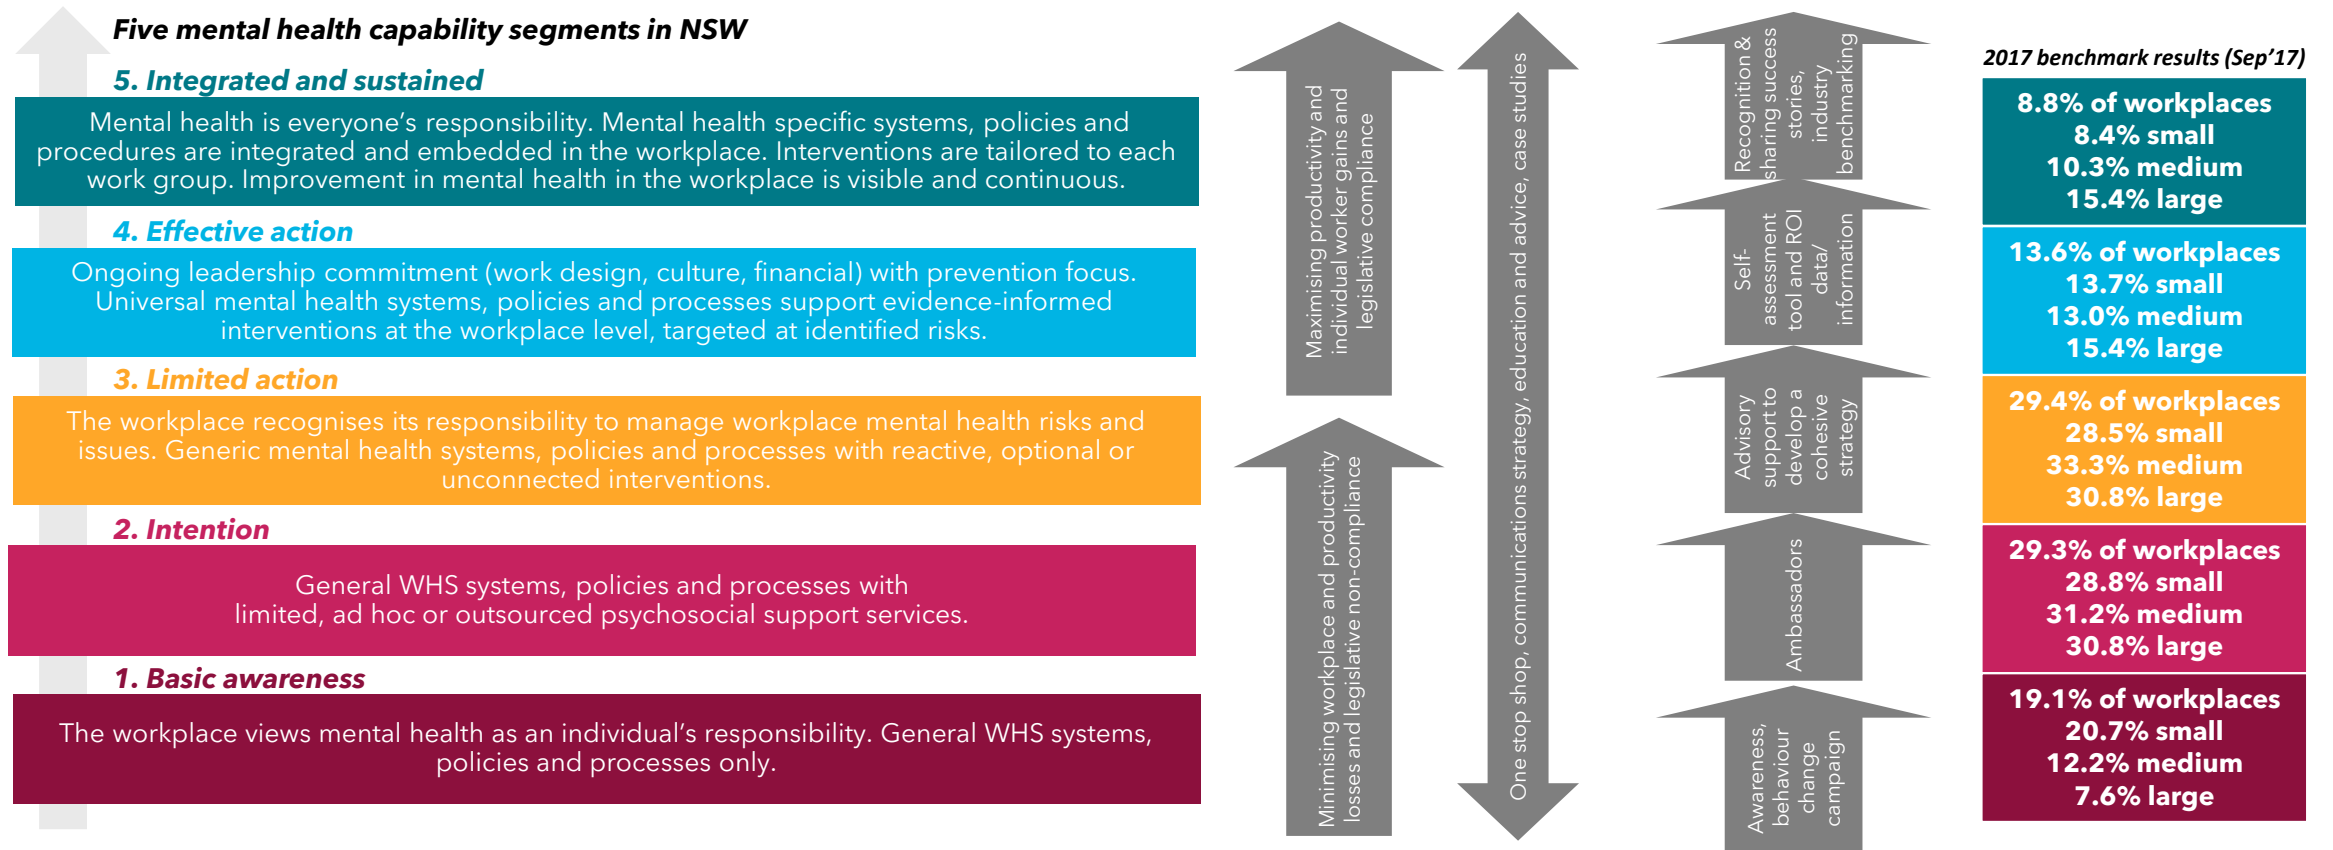

- Nearly one in six Australian workers experience a significant level of mental ill-health in a four-week period.
- If unaddressed, this can have long-term impacts on an individual's mental health, quality of life and financial independence, which can in turn impact their family and the community.
- One third of adult life is spent at work and the workplace can prevent mental ill-health and promote recovery or, conversely, cause or exacerbate mental illness. The rising expenditure related to workplace mental health is largely attributed to treatment, rather than prevention.
- The workplace presents a unique opportunity to reduce the impact and severity of mental ill-health in NSW. Mentally healthy workplaces achieve better mental health outcomes and experience returns of up to four dollars for every dollar invested and additional benefits, such as improved staff retention, increased productivity and more engaged workers.

### The strategy

- The NSW government's vision is to ensure NSW workplaces take effective action to create mentally healthy workplaces to enable "healthy, safe and productive working lives".
- By 2022, the aim is to have more than 90,000 NSW businesses taking effective action to create mentally healthy workplaces, with the target of a 30% reduction in serious workplace illness and injuries by 2022 outlined in the WHS Roadmap for NSW 2022.
- Ultimately, the outcomes being sought include:
  1. Increased awareness and understanding of mentally healthy workplaces
  2. Increased capability and awareness of NSW employers to create mentally healthy workplaces
  3. Improved NSW workers' perception that their workplaces are safer and healthier
  4. Better promoted, preserved and restored social connections within the workplace and community
  5. Improved productivity, due to reduction in absenteeism and presenteeism, improved recovery at work outcomes and employer cost savings.

# the 2017 benchmark study

In collaboration with mental health experts, advocates and Instinct and Reason, SafeWork NSW developed the mentally healthy workplaces in NSW benchmarking tool (BMT) - a tool that measured the capability of **employers** to create mentally healthy workplaces, identified the initiatives most needed, and enables future evaluation of the success of the NSW Mentally Healthy Workplaces Strategy. The 2017 BMT surveyed 2,000 NSW workplace employers to establish baseline metrics (workers were not surveyed in the 2017 study), with the results indicating NSW workplaces were widely distributed across five capability segments to prevent and manage mental health at work. These are listed below with the distribution of workplaces:

# the 2020 pilot validation study

- The 2020 mid-term evaluation builds on the results of the 2017 mentally healthy benchmarking tool (BMT) by validating the BMT through a qualitative and quantitative pilot study. This was to ensure the BMT was understandable to workers and accurate in describing the performance of the workplace in being a mentally healthy place to work.
- By getting these two elements right, the BMT incorporates and compares the employer and worker perspectives to measure the current mentally healthy status of the workplace.
- **The validation pilot study validated the BMT** by establishing that a relationship does exist between positive workplace behaviours (the workplace attributes measured in the benchmark) and a genuinely mentally healthy workplace (these additional factors were identified and then included in the pilot test validation survey). The results showed that the segments, as based on worker and employer views about the actual state of the workplace, do in fact correlate with better mental health workplace outcomes and, as such, the BMT was validated.
- **The validation pilot study designed a worker survey** that incorporates the worker perspective while ensuring workers can complete the BMT survey in a meaningful way (that is, ensuring they understood the questions, and could answer them), and showed that the results were consistent with the employer BMT. The existing BMT was found to be ambiguous and unclear in parts for workers who are not exposed to policies, training, vision, or what managers receive by way of training. As such, section D and E scales were revised to a yes or no while section B and C had the scale terminology revised.

## 2020 VALIDATION PILOT STUDY APPROACH

### STEP 1

- We conducted 36 expert interviews qualitatively 25<sup>th</sup> June 2020 to 29<sup>th</sup> July 2020
- To establish face validity/content to enhance the survey in line with union reps, senior health and safety reps and workers exposed and engaged with issues related to a mentally healthy workplace

- **Implemented a Yes / No** scale for Sections D & E
- **Revised** Likert-type semantic scale to enhance understanding and suitability to workers
- **Deleted** ambiguous and repetitive statements
- **Simplified** wording and terminology
- Added **experience** of mental health events and more attitudinal statements
- Added **COVID-19** questions

### STEP 2

- We put the revised survey into field on 4th September 2020 to 14th September 2020 with the worker and employer samples
- We achieved n=506 workers and n=302 organisations
- To establish survey validity using robust quantitative techniques and analysis

- **Outcome of this step: make proposed revisions to survey instrument/s in consultation with SafeWork NSW**

# the 2020 benchmark re-execution

this report details insights gained from the two BMT surveys worker and employer

## Objectives

This 2020 mentally healthy survey re-execution aims to understand whether an increased number of NSW businesses were taking effective action to create a mentally healthy workplace.

More specifically:

- To identify the NSW workforce's current performance in providing a mentally healthy workplace (MHW) and its capacity for incorporating mental health awareness and initiatives into their workplace health and safety systems and procedures.
- To support the NSW workplaces through the provision of trended data against the 2017 benchmark results to determine progress in achieving more mentally healthy workplaces.

## Method

These insights are based on online survey responses from its workforce; with the survey developed from SafeWork NSW's benchmarking tool surveys of 2020.

### Length of survey:

- Employer survey: **14 mins 20 secs**
- Worker survey: **13 mins 57 secs**

## Timing of fieldwork

- Launched on the 6<sup>th</sup> of October, 2020
- Completed on the 11<sup>th</sup> of November, 2020
- 36 days in field

## Sample

NSW employers

4002

NSW workers

8005

A further breakdown of the worker sample is as follows (more detail can be found in the appendix):

	Worker	Employer
Supervisory role	2,737	4,002
Non-supervisory	5,268	
<b>Sub-total</b>	<b>8,005</b>	<b>4,002</b>
<b>TOTAL</b>	<b>12,007</b>

# the four themes and 24 attributes measured for workers

 <b>Policy and processes</b>	 <b>Managing risk in the workplace</b>	 <b>Education and training</b>	 <b>Support services</b>
<p><b>POLICIES</b></p> <ol style="list-style-type: none"> <li>1. There is a vision or strategy for mental health and worker wellbeing</li> <li>2. There are policies in place for mental health and worker wellbeing</li> <li>3. There is a measurement system in place for how the workplace is doing on mental health of its workers (use of KPIs)</li> </ol> <p><b>PROCESSES</b></p> <ol style="list-style-type: none"> <li>4. There are processes to limit mental health risks and stressors in the workplace (e.g. changing work design, rosters, schedules, hours worked, social events etc)</li> <li>5. There is organisational data on mental health and they act on this to make changes for the better</li> </ol>	<p><b>RISK IDENTIFICATION</b></p> <ol style="list-style-type: none"> <li>6. Has a positive mental health culture that is seen as everyone's responsibility</li> <li>7. Consults with workers to identify workplace pressures and risks (i.e. using informal meetings, surveys, etc)</li> </ol> <p><b>WORK DESIGN MANAGEMENT</b></p> <ol style="list-style-type: none"> <li>8. Has leaders that proactively identify where there are mental health risks</li> <li>9. Has managers that think about the workloads, tasks, and responsibilities of workers to minimise mental health risks</li> <li>10. Has managers in place that are easy to talk to and approachable about mental health and worker wellbeing</li> </ol> <p><b>CONSULTATION AND ENGAGEMENT</b></p> <ol style="list-style-type: none"> <li>11. Consults workers about mental health and worker wellbeing</li> </ol> <p><b>MENTAL HEALTH PROMOTION</b></p> <ol style="list-style-type: none"> <li>12. Undertakes activities and communications that promote mental health and wellbeing (i.e. encouraging us to take walks during lunchtime, meditation sessions etc)</li> <li>13. Promotes mental health and worker wellbeing at work (for example workers are made aware of issues like bullying and harassment, team work is encouraged to reduce stress, conflict resolution is taught etc)</li> </ol>	<p><b>LEADER TRAINING</b></p> <ol style="list-style-type: none"> <li>14. Leaders are trained to recognise the warning signs of potential mental health issues</li> </ol> <p><b>WORKER TRAINING ATTRIBUTES</b></p> <ol style="list-style-type: none"> <li>15. Workers have compulsory induction training when they start on the topic of workplace mental health</li> <li>16. Workers get training on what are the workplace risks that could lead to poor mental health</li> <li>17. Workers get training on what they can do to be more capable to manage their mental health</li> <li>18. Workers are trained in how to provide support for their fellow workers</li> </ol>	<p><b>RESOURCES &amp; SERVICES</b></p> <ol style="list-style-type: none"> <li>19. Organisation gives me access to internally available support services for mental health and worker wellbeing that the organisation has made known to us</li> <li>20. Organisation gives me access to support services outside of this organisation for mental health and worker wellbeing that the organisation has made known to us</li> <li>21. Organisation gives me access to peer support programs</li> <li>22. Organisation gives me access to internally available support services, that are not only trained in mental health, but I have been told I can access for this reason (e.g. First aiders, OHS officers, union reps etc)</li> </ol> <p><b>PROMOTION &amp; ENDORSEMENT OF SUPPORT SERVICES</b></p> <ol style="list-style-type: none"> <li>23. The organisation has managers who promote the use of support services for mental health</li> </ol> <p><b>QUALITY CONTROL ATTRIBUTES</b></p> <ol style="list-style-type: none"> <li>24. The organisation evaluates and improves the quality of support services it provides</li> </ol>

# the scales used to measure the themes and attributes

## Employer BMT

All four themes and 42 attributes in the employer BMT are measured with the same scale as 2017. In the employer BMT, this scale and definitions, were shown as a reference to respondents:

<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Intention</b>	Some focus on mental health
<b>Basic Awareness</b>	Little/no focus on mental health

## Worker BMT

The existing employer BMT scales were found to be ambiguous and unclear in parts for workers. In section B, policies and process, and in section C, managing risks in the workplace, the following scale was shown to respondents:

Mental health is effectively addressed
Only when a mental health incident happens (mental health has a limited focus)
Discussions to make it happen, but no action (has some focus on mental health)
Don't think that's happening
Don't know/not sure

In section D, education and training, and in section E, support services, the following scale was shown to respondents:

Yes
No
Don't know/not sure

# 2 executive summary

# progress on achieving mentally healthy workplaces in NSW

## Are we meeting the strategy target?

### STRATEGY GOALS

By 2022, more than 90,000 NSW businesses will be taking effective action to create mentally healthy workplaces. At minimum, there will be ongoing leadership commitment (work design, culture, financial) with a preventative focus. Universal mental health systems, and policies and processes will support evidence-based interventions at the workplace at all levels while targeted at identified risks.

### What the segment ratings tells us:

The following segment definitions are provided for reference and equate to the description shown in the employer BMT survey. The complete definition can be found in the background section.

<b>Basic Awareness</b>	Little/no focus on mental health
<b>Intention</b>	Some focus on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements

\*According to ABS business indicators, there are 319,152 employing businesses in NSW at the end of financial year 2019 and 301,527 at the end of the 2016 financial year.

**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓ / ↑ significantly less/more than 2017]

# employer segments compared to worker segments

2020 rating comparisons using a standardised scoring approach

Following the calibration of scaling across the two surveys, we achieved remarkably similar segment outcomes, which provides face validity to the survey results. Both results link higher performing segments to a wide range of outcomes that indicate a mentally healthy workplace actually exists.

	Employer Score	Worker Score
Basic Awareness	<84	<22
Intention	85-126	23-36
Limited Action	127-168	37-59
Effective Action	169-200	60-69
Integrated & Sustained	>200	70

# employer segments compared to 2017

## 2020 employer ratings (senior management / HR roles)

The mid term study finds an overall small but positive shift since the 2017 benchmark with:

- Basic awareness down by 2.3%
- Intention down by 0.1%
- Limited action up by 0.9%
- Effective action up by 3.2%
- Integrated and sustained down by 1.8%

Overall there is positive shift from 2.59 to 2.68 in three years and a more mature realisation that integrated and sustained requires more work than initially understood.

Number of businesses*	2017 n=	2020 n=
Integrated & Sustained	26,534	22,341
Effective Action	41,008	53,618
Limited Action	88,468	96,512
Intention	88,136	93,256
Basic Awareness	57,381	53,426
<b>Total</b>	<b>301,527</b>	<b>319,152</b>

\*According to ABS business indicators, there are 319,152 employing businesses in NSW at the end of financial year 2019 and 301,527 at the end of the 2016 financial year.

**Base:** NSW employers (senior management / HR roles); 2020 n=4,002; 2017: n=2,000

**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓ / ↑ significantly less/more than 2017]

# employer segments: business size

## a comparison with 2017

- The improved segment average in NSW (2.59 in 2017 to 2.68 in 2020) is being driven by significantly more medium sized businesses taking effective or integrated mental health action in their workplace (23% in 2017 to 35% in 2020).
- Larger entities continue to have greater presence in the effective action and integrated & sustained segments, with indicative rises having occurred since 2017 (30% to 44%).

**Base:** NSW employers (senior management / HR roles); 2020 n=4,002 (large n=885, medium n=1,889, small n=1228); 2017 n=2,000 (large n=430, medium n=770, small n=800)

**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓ /↑ significantly less/more than 2017]

# employer segments: industry

## a comparison with 2017

• Three of the four target industries had significant improvements in their segment averages since 2017; they are the only industries to see a significant improvement over this period (Information, media and telecommunications rose, but this cannot be significant due to a low sample in 2017).

**What the segment ratings tells us:**

<b>Basic Awareness</b>	Little/no focus on mental health
<b>Intention</b>	Some focus on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements

\*low sample size (less than 30)  
**Base:** NSW employers (senior management / HR roles); 2020 n=4,002; 2017: n =2,000; samples vary per industry  
**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓ / ↑ significantly less/more than 2017]

**TARGET industries:** 2017 benchmarking tool data showed these four industries as being high-risk because they lacked the knowledge or skills to create a mentally healthy workplace. They became a key focus for the strategy between 2017 and 2020

# employer segments: Sydney metro vs regional NSW

## a comparison with 2017

- Regional NSW and Sydney metro have both seen significant improvements in their employer segment averages since 2017.
- Regional NSW continues to outperform the NSW average (2.77 v 2.68) with Sydney metro just below the average (2.63 v 2.68).

What the segment ratings tells us:	
<b>Basic Awareness</b>	Little/no focus on mental health
<b>Intention</b>	Some focus on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements

**Base:** NSW employers (senior management / HR roles); 2020 n=4002; 2017: n =2,000; samples vary per region  
**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓ / ↑ significantly less/more than 2017]

# 2020 employer metrics vs. 2017

There has been a significant improvement in most of the 42-employer metrics since 2017. The greatest improvement has been among the worst performing metrics of 2017 while the remaining top metrics have seen minimal improvement since 2017.

Best performing metrics in 2020 (mean results)					Least performing metrics in 2020 (mean results)				
	2020	2017	Change		2020	2017	Change		
Consults workers about health and safety	3.63	3.49	0.14 ↑	A WHS strategy that is monitored	3.47	3.37	0.10 ↑		
Report the safety consultation results to management	3.57	3.49	0.08 ↑	Organisation evaluates the support services quality and improves them	3.46	3.17	0.29 ↑		
Organisation's safety culture is everyone's responsibility	3.57	3.61	-0.04 ↓	Managers are trained to prevent and manage stigma around workers health	3.46	3.30	0.16 ↑		
Report the safety consultation results to workers	3.56	3.44	0.12 ↑	Resources allocated to prevent incidents and manage safety	3.46	3.30	0.16 ↑		
Managers cooperate with workers to identify risks to inform WHS strategies	3.55	3.53	0.02 ↑	Workers can access WHS support with clinically trained professionals	3.46	3.34	0.12 ↑		
Consults workers to identify workplace risks/hazards	3.54	3.49	0.05 ↑	Managers are trained in designing safe workplaces	3.46	3.38	0.08 ↑		
Managers support and commit to worker safety and wellbeing	3.54	3.51	0.03 ↑	Managers promote use of support services	3.46	3.38	0.08 ↑		
The types of WHS incidents are measured/recorded	3.54	3.53	0.01 ↑	Organisation links use of support services to its WHS KPIs	3.45	3.15	0.30 ↑		
Tailored WHS promotions relating to risks present in your workplace	3.53	3.31	0.22 ↑	Training to build leaders' ability to prevent and manage the workers' health	3.45	3.35	0.10 ↑		
Designs work to improve safety and wellness outcomes	3.53	3.41	0.12 ↑	Information is provided about outsourced support services when requested	3.45	3.36	0.09 ↑		
Workers have compulsory induction training	3.51	3.39	0.12 ↑	Worker training programs to prevent and manage the health of workers	3.45	3.42	0.03 ↑		
Undertake activities and communications that promote WHS	3.51	3.43	0.08 ↑	Organisation monitors the use of support services	3.44	3.17	0.27 ↑		
Processes for prevention efforts for workplace illnesses and injuries	3.50	3.48	0.02 ↑	Workers have access to self-service health tools	3.44	3.26	0.18 ↑		
Workplace illness and injury prevention activities informed by data	3.49	3.34	0.15 ↑	Workers trained to support for their fellow workers regarding WHS	3.43	3.24	0.19 ↑		
A WHS or wellbeing strategy	3.49	3.38	0.11 ↑	Managers know the best language and approach when dealing with WHS	3.43	3.43	0.00		
Workers have access to internal or external support	3.49	3.40	0.09 ↑	Organisation monitors if workers use internal/external WHS support services	3.42	3.16	0.26 ↑		
Managers proactively identify where there are risks of injury	3.49	3.48	0.01 ↑	Key performance indicators for workplace health and safety	3.42	3.32	0.10 ↑		
Managers and workers put their training into practice	3.48	3.39	0.09 ↑	Managers make it normal for workers to use support services	3.42	3.39	0.03 ↑		
A health and safety and worker wellbeing policy	3.48	3.41	0.07 ↑	Workers have access to peer support programs	3.41	3.18	0.23 ↑		
Workers have training programs that make them aware of workplace risks	3.48	3.46	0.02 ↑	Workers have training programs on stigma reduction around ill health	3.40	3.22	0.18 ↑		
Managers adjust the design of work to minimise risk of injury	3.48	3.52	-0.04 ↓	Has a vision for worker health and wellbeing	3.37	3.41	-0.04 ↓		

Base: NSW employers (senior management / HR roles); 2020 n=4,002; 2017: n=2,000

Significance: two tailed test of difference at a 95 per cent level of confidence [↓/↑ significantly less/more than 2017]

Strongest improvement since 2017

Weakest change since 2017

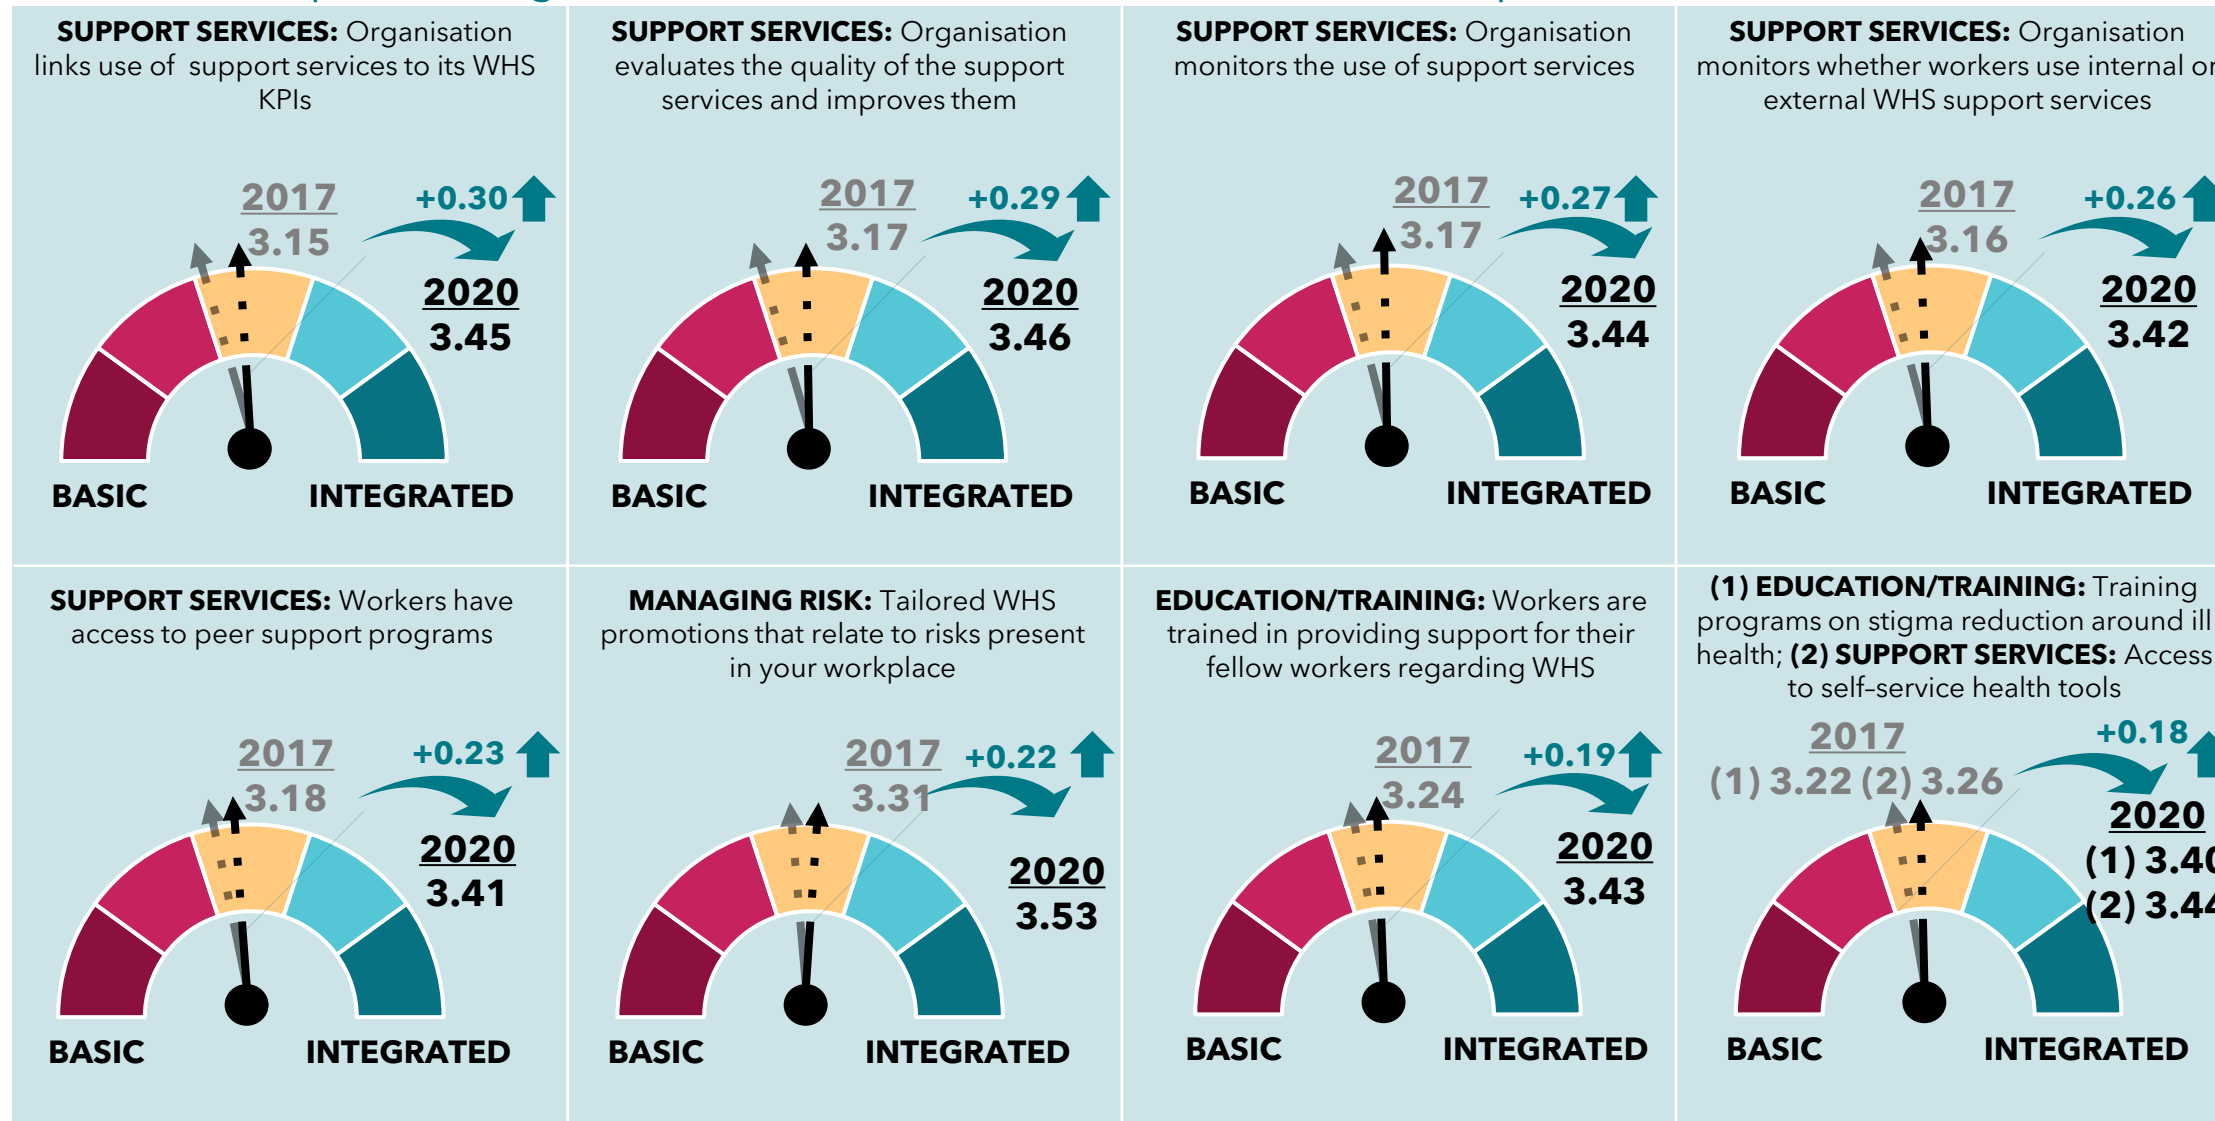

Policy/Process Managing risk Education Support

# 2020 employer metrics with the most positive increases

the bottom 8 performing metrics in 2017 all account for the most improved metrics in 2020

**Significance:** two tailed test of difference at a 95 per cent level of confidence [↓/↑ significantly less/more than 2017]

# 2020 employer metrics with the least movement

only 3 metrics fell below the 2017 figures. All others either improved or they remained relatively stable

# 2020 worker segments: industry

## What the ratings tells us:

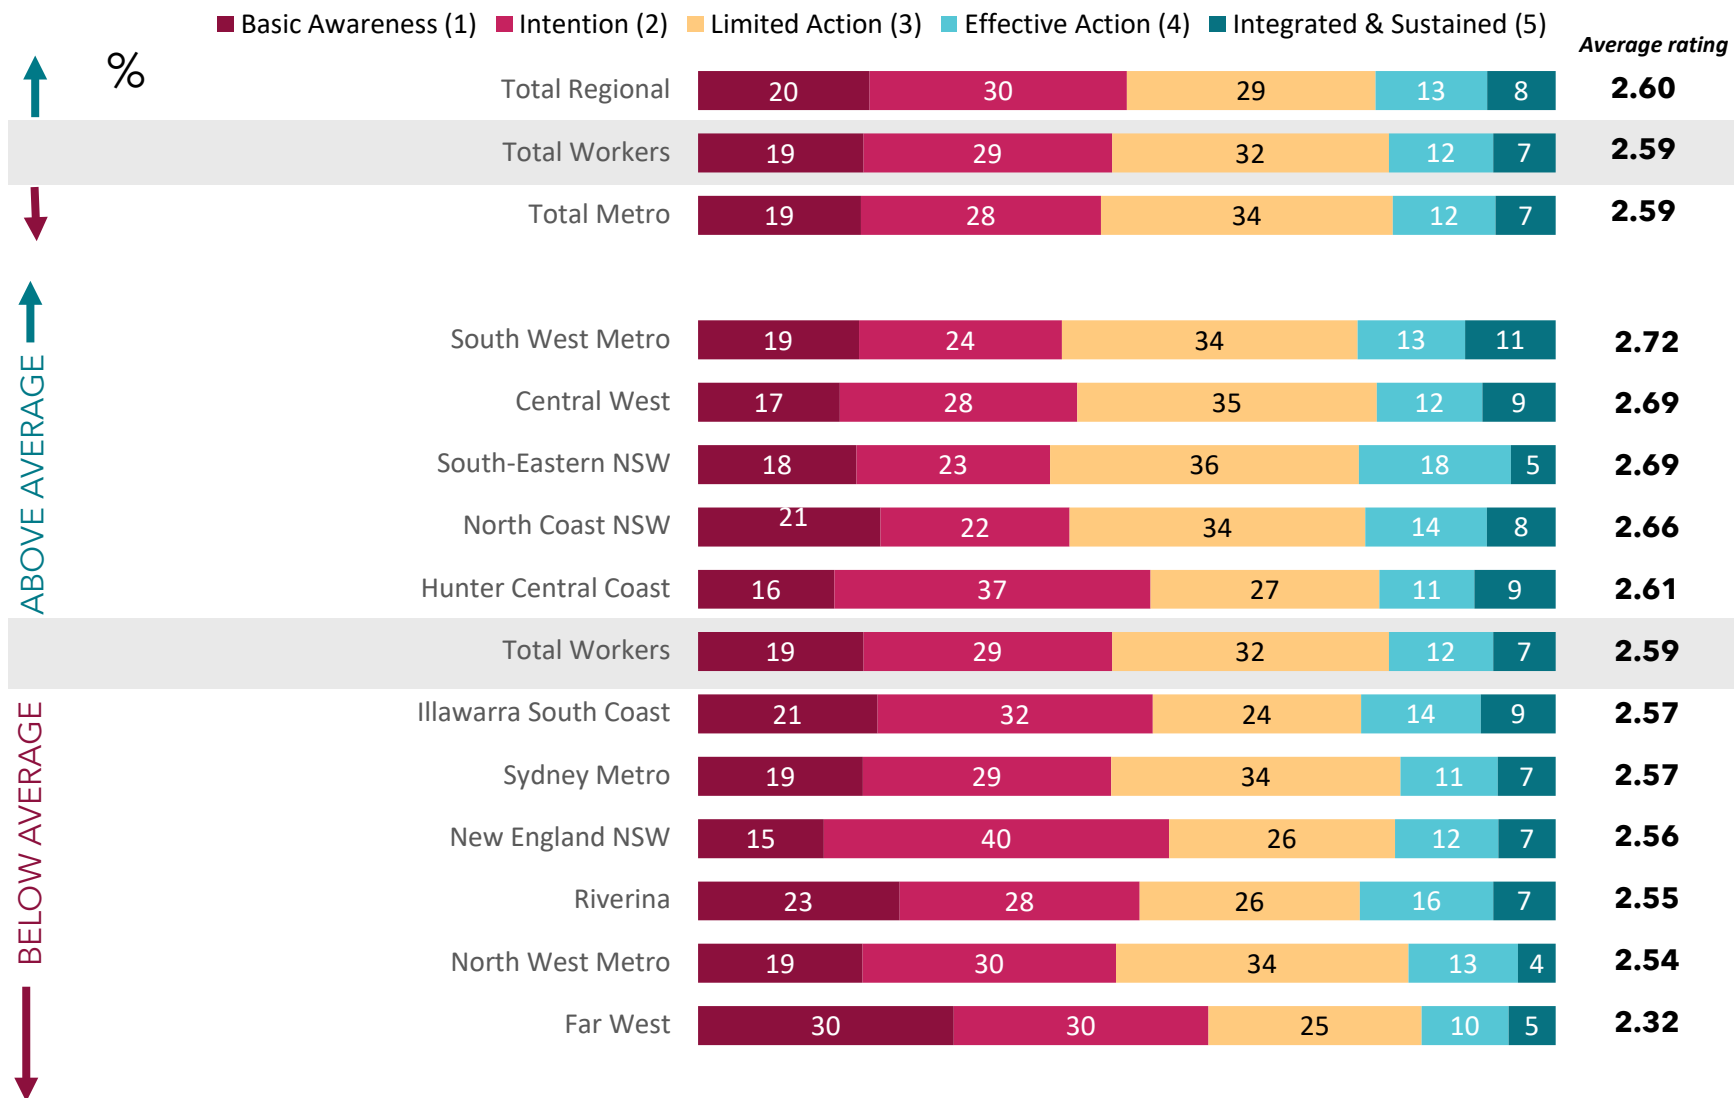

<b>Basic Awareness</b>	Little/no focus on mental health
<b>Intention</b>	Some focus on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements

**Rating scales:** there is a calibration of the worker survey scale to 'match' the employer survey scale to make comparisons. This normalisation of the scaling of the two overall scores occurs according to:

	Employer Score	Worker Score
<b>Basic Awareness</b>	<84	<22
<b>Intention</b>	85-126	23-36
<b>Limited Action</b>	127-168	37-59
<b>Effective Action</b>	169-200	60-69
<b>Integrated &amp; Sustained</b>	>200	70

# 2020 worker segments: Sydney metro vs regional NSW

**What the ratings tells us:**

<b>Basic Awareness</b>	Little/no focus on mental health
<b>Intention</b>	Some focus on mental health
<b>Limited Action</b>	Only focuses on mental health when an incident occurs
<b>Effective Action</b>	Targeted and proactive on mental health
<b>Integrated &amp; Sustained</b>	Mental health policy that is embedded across the business with tailored and continuous improvements

**Rating scales:** there is a calibration of the worker survey scale to 'match' the employer survey scale to make comparisons. This normalisation of the scaling of the two overall scores occurs according to:

	Employer Score	Worker Score

# data handling

---

## Weighting of the data

The actual sample profile provides the unweighted responses. The results presented in the rest of the report is weighted to the population based on ABS data by ward area, age and gender.

## Statistical significance - 5% at 95 per cent level of confidence

All tests for statistical significance have been undertaken at the 95 per cent level of confidence, and unless otherwise noted, any notation of a 'difference' between subgroups means that the difference discussed is significant at the 95 per cent level of confidence. When reporting significant differences in segments, (+x%; x%) represents the difference in % above total sample, and % of total sample respectively.

A red circle or green square around a value denotes that the result is significantly lower or greater (respectively) than that of the total sample for that question. E.g.

## Treatment of means

Where responses are scale variables, for example 1 to 5 where 1 is disagree strongly and 5 is agree strongly, the mean is also calculated with the removal of don't know.

## Rounding of figures - may result in anomalies of +/- 1%

All results have been rounded to the nearest whole percentage figure and anomalies of about +/- 1% may occur in charts i.e. total percentages for each bar add to 99%, or 100% or 101% due to rounding error.

## Nett figures are also rounded - which may also result in anomalies

Nett results are also rounded after summing the separate proportions rather than simply summing two rounded figures (e.g. '% total agree'). For this reason, anomalies of about 1% sometimes occur between net results and rounded results shown in charts. For example, a proportion of 33.3% 'agree' rounds to 33%, and a proportion of 12.4% 'strongly agree' rounds to 12%. However, when combined to derive the total agree (i.e. agree plus strongly agree), 33.3% plus 12.4% equals 45.7%, which would be rounded to 46%. In this case, the results would be shown in a chart as 33% agree and 12% strongly agree, but the proportion reported as 'total agree' would be 46%.

## **Survey limitations**

A limitation of the Mentally Healthy Workplaces in NSW Benchmarking Tool is that the survey relies on representatives' self-assessment of their workplace's performance and by association, their own performance as the highest-ranking decision maker in mental health and wellbeing (or WHS or HR).

Moreover, they completed the survey knowing it was being conducted on behalf of the workplace health and safety Regulator, SafeWork NSW. This may have resulted in a tendency to slightly overrate performance. To overcome this limitation the survey tried, wherever possible, to ask questions about observable behaviour rather than attitudes.

While this self-assessment survey may have produced a slight positive skew on the mental health performance ratings, this same tendency will continue to exist in subsequent evaluations of this Benchmarking Tool. Therefore, the results provide a solid benchmark for future comparison and evaluation.

Microbusinesses (1-4 employees) were excluded from the study as it was determined that workplaces of this size, particularly sole traders would require a significantly different survey and be unlikely to provide responses regarding workplace systems, policies and processes for mental health.
