

WHAT TO DO IN CASE OF FIRE

Respond immediately when alerted to a fire in your building. Listen for any instructions and calmly evacuate to your pre-planned safe meeting place. If the fire started in your apartment, close any doors as you leave to help contain the fire and smoke.

Don't use lifts in a fire unless they are for emergency use. Use emergency exits or fire stairs, which provide a path leading you to a safe place away from the building.

Get out, stay out and call Triple Zero (000).

Never go back inside a burning room or building, even if you think it is safe to do so or if a sprinkler has activated. There may still be danger present that you can't see.

IF YOU CANNOT ESCAPE BY FIRE STAIRS

Close all windows and doors to stop smoke entering your apartment.

Call Triple Zero (000) immediately and tell the operator there is a fire in your apartment block. Tell them your apartment number and that you are unable to get out safely, and then follow their advice.

Listen for instructions from firefighters or other emergency services.

CLADDING REMOVAL AND FIRE SAFETY IN HIGH-RISE BUILDINGS

Your building is a part of Project Remediate - a NSW Government program to safely remove high-risk combustible cladding from residential apartment buildings.

During the remediation process, your building may be more vulnerable to fire. Help protect yourself and others by following these fire safety tips.

HIGH-RISE FIRE SAFETY TIPS

FACT: A FIRE CAN BECOME FATAL IN LESS THAN THREE MINUTES.

Only working smoke alarms save lives. Have and maintain working smoke alarms in your apartment. Some buildings may have an interconnected system of smoke detectors throughout the common areas which may also extend into each apartment, which will provide early warning of a fire to all occupants in the building. Never tamper with, block, cover or disable smoke alarms or detectors.

Do not use BBQs or outdoor heating devices on balconies during the remediation process and never use them indoors.

Avoid smoking on balconies especially during the remediation process. Extinguish cigarettes properly in a deep, non-combustible ashtray inside or away from the building.

Know where the fire exits, fire stairs and firefighting equipment are located and familiarise yourself with the building's evacuation procedures.

NEVER prop open fire doors or leave anything in fire stairs.

Make and practice an escape plan from every room in your apartment with your family. Decide on a safe meeting place outside and away from the building. If you think you may need assistance, consider a personal emergency evacuation plan.

Keep balconies clear of combustible items, especially near air conditioning units.

TEST YOUR SMOKE ALARMS EVERY MONTH TO ENSURE THEY ARE IN WORKING ORDER. REMEMBER, ONLY WORKING SMOKE ALARMS SAVE LIVES.
