

## Live Traffic NSW App

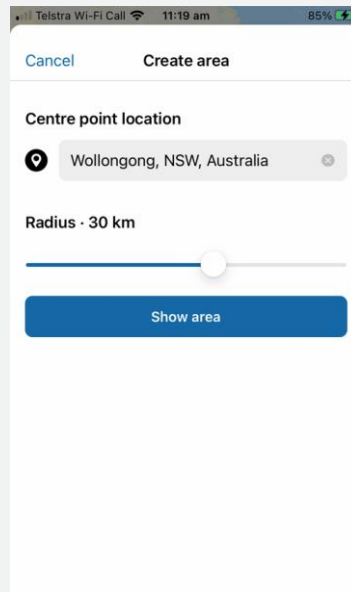

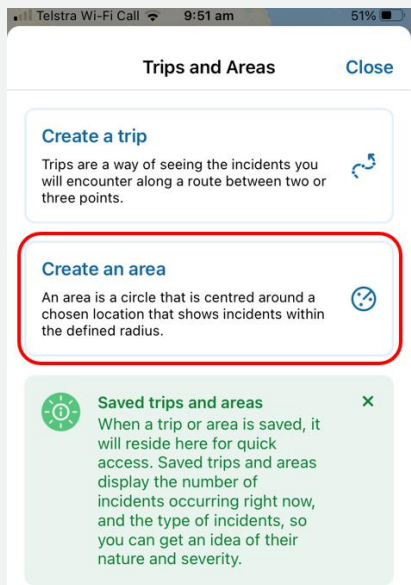

### Trip planning instructions

Before you start your journey on NSW roads, download the Live Traffic NSW app and take advantage of the great trip planning tools on offer. Below are some simple instructions for setting up a trip to activate incident notifications.

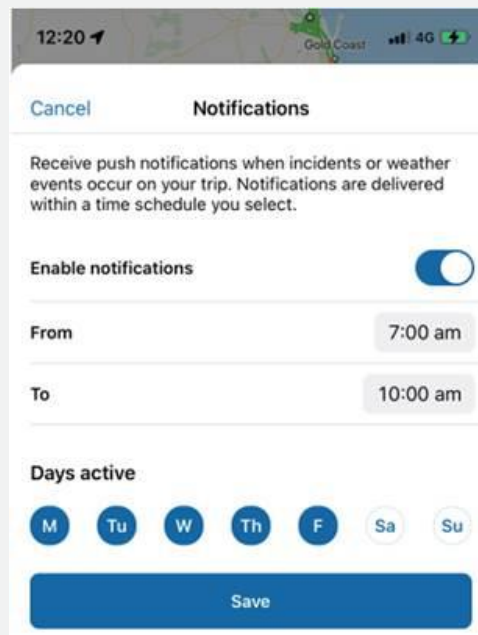

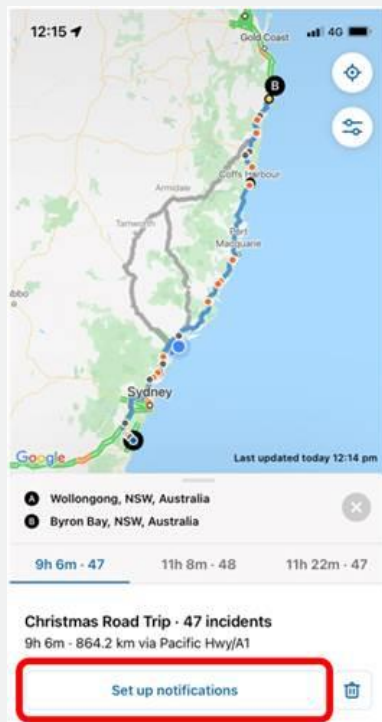

1. Launch the Live Traffic NSW app from your phone's home screen and select 'Trips and Areas'. You can choose to create a trip by inputting your departure and destination points.

2. You can also create an area by setting up to a 50km radius around a particular location.

3. Once you've saved your created trip or radius, set up notifications to be notified if an incident occurs on your route.

4. When incidents are identified along your intended travel route, you can follow them to receive up to date information.
